SUMMARY

Product Designer with a B.Des in Industrial Design, working across user research, interaction design, user flows and high-fidelity prototyping. Currently designing a property listing portal at Layr Labs. Previously redesigned a recruiting tool for freelance recruiters at Leoforce, from research to usability testing. Work closely with product managers and senior designers, and use AI-assisted prototyping (Claude Code) to test ideas sooner.

CORE SKILLS

Design: UX/UI Design, Wireframing, Prototyping, User Research, User Personas, Journey Mapping, User Flows, Competitive Analysis, Usability Testing, Interaction Design, Visual Systems, Design Systems
Tools: Figma, Figma MCP, Claude, Claude Code, Google AI Studio, Antigravity, Lovable, Adobe Illustrator
Additional: AI-Assisted Prototyping, Cross-Functional Collaboration, 3D Visualization (CATIA V5), GD&T

EXPERIENCE

Designer, Layr Labs, Hyderabad — Jul 2026 – Present

- Design a property listing portal end to end, from user flows to high-fidelity screens in Figma.
- Use Claude, Claude Code and the Figma MCP to speed up design-to-build workflows and keep design and implementation in sync.

UI/UX Design Intern, Leoforce, Hyderabad — Nov 2025 – Jul 2026

- Redesigned Connect, a recruiting tool, for freelance recruiters: research showed they lacked affordable sourcing, communication and networking tools.
- Designed a unified inbox, visible peer feedback on shared candidate profiles, peer discovery and a free tier.
- Delivered personas, user flows, wireframes, high-fidelity Figma prototypes and a design system; ran usability testing and incorporated feedback from Senior Designers and a Product Manager.
- Ran competitive analysis and brainstorming sessions to identify and close feature gaps in the core product.

Digitization Intern, Tata Boeing Aerospace Ltd., Adibatla — May 2025 – Jun 2025

- Streamlined manufacturing workflows by converting legacy aerospace drawings into high-precision 3D models in CATIA V5 (Part Design, Boolean operations, basic Generative Surface Design) to support NC programming, manufacturing and assembly of aircraft parts.
- Applied GD&T and engineering fits to improve manufacturability and accuracy; documented sheet metal, riveting, CNC machining, rigging and sealant processes.

SELECTED PROJECT

PATH, Startup Ecosystem Platform, Design thesis, Woxsen University

- Designed a mentorship-first community platform for early-stage design founders in India, addressing business, legal and mentorship gaps.
- Interviewed 7 founders, ran competitive analysis, and built a working MVP prototype using Lovable.

EDUCATION

Bachelor of Design (B.Des), Industrial Design, Woxsen University — 2022 – 2026
Senior Secondary (PCM, Computer Science), International Indian School, Al-Jubail — 2009 – 2022
